INTRODUCTION

This plan discusses where Oregon City’s Municipal Records have been, its current status, and its plan for future development. Historically, Oregon City has maintained its records within the department that created the records. In 2007, the City Commission approved a five-year strategic plan that began the development of a central records repository and an educational program for City employees to maintain and preserve public records. A citywide “Grateful Shred Day” was developed to focus employees on public records laws and implementing best practices related to maintenance and storage of public records. The strategic plan included values, vision, and mission statements and five goals which further identified various objectives to reach the goals. The five-year plan resulted in the following outcomes:

- Permanent records were located and boxed appropriately for storage.
- An offsite records storage facility was secured to store the records.
- Employees were educated on the City Retention Schedule, public records laws, and the responsibility of maintaining the records as a valuable public asset.
- A records destruction procedure was implemented according to state law.
- Electronic records were identified and uploaded to an electronic storage system and made accessible to the public through the City’s Website.
- Policies and procedures were established to support the maintenance and preservation of the records.
- An assistant city recorder position was created to focus on records management.

The 2014-2018 strategic plan is written to build on the previous plan and further the efforts made to develop electronic systems, build transparency of government, further educate employees and the public of the value of public records, reduce paper, and comply with laws and policies related to the preservation of the records. A further commitment of staff, funds, and technology will allow these values to continue and permit the City to be on the cutting edge of transparency and good governance. Oregon City has come a long ways in its efforts to protect its asset (records) and to ensure accessibility of these records to the right person, at the right time, at the right cost, and for as long as needed.

Today, our records management plan is fully functional. Each component of the “Life Cycle of a Record” contains necessary policies or procedures to accomplish the various tasks. (See Life Cycle of a Record on following page). Management of information in today’s world requires fulltime efforts and appropriate knowledge by all involved in the creation, distribution, use, maintenance, and disposition of City records.
LIFE CYCLE OF A RECORD

1. CREATION
   Correspondence
   Memos
   Directives
   Forms
   Reports
   Drawings
   Copies

   Destroy
COMMENTS FROM THE CITY RECORDER

This document is written to reflect that the records and information world of the City is on the right course toward achieving success. Accomplishing the goals and objectives in this plan will take time, resources, commitment, and education of all personnel.

This Strategic Plan is written to cover the period 2014-2018.

The City Recorder is the City of Oregon City’s record-keeper. Effective recordkeeping safeguards the trust in which citizens depend for documenting their individual rights to ensure accountability and credibility for their City institutions. Good governance demands that the Recorder’s Office provide a response to an almost unlimited range of information requests, and the City’s response is accomplished according to state law and City policy.

The records we preserve and make available every day directly affect the lives of thousands of Oregon City’s citizens, as well as furthering the understanding of the City’s history. Additionally, more of these records are being electronically created and maintained than ever before. The City Recorder’s office anticipates exponential growth in the number of electronic records needed and requiring management in the coming years.

This Strategic Plan acknowledges the significance of the maintenance, preservation, and accessibility of electronic records, and the City Recorder’s role as the City’s record-keeper. Meeting these responsibilities in an era of records proliferation, technological change, and financial challenge is the purpose of this five-year Strategic Plan. How we will meet our challenges depends on the success of the objectives in this Plan. The Plan will serve as a guide that will help align priorities and assign resources.

This document identifies what we must do during the next five years to maintain the trust that citizens have placed in us. The Plan’s ambitious goals must be met because the City Recorder’s organization is a critical and central organization within the City’s structure. It serves not just today’s residents, but also those who are yet to come. Preserving past and present documents currently archived is crucial, and planning to manage tomorrow’s records in new and challenging forms is the task the City must accomplish. If the citizens of Oregon City are to have faith in their public institutions, the records of those institutions must be secure, open, and accessible. Ensuring that they are is the vital function of Records and Information Management.
WHAT DO WE WANT TO ACHIEVE?

Strategic planning begins by identifying the basis of the City Recorder’s Office’s mission, vision, and values, and carefully expressing them through five goals and many objectives. They are as follows:

VISION

Our vision is to provide accurate, efficient service utilizing 21\textsuperscript{st} Century technology to manage past, present, and future records of the City of Oregon City.

MISSION

The City Recorder’s Office will preserve, maintain, and provide ready access to public records to the Citizen, the Public Servant, and the City Commission in an efficient, transparent, and timely manner in conformance with all State laws and City policies.

VALUES

To succeed in our mission, all employees will endeavor to value the following:

- Ensuring an open and transparent government
- Work together to accomplish the goals and objectives for records management
- Recognize the value of public records
- Act with honesty and integrity toward managing public records
- Comply with laws and policies concerning retention and disposition of public records
- Experiment, try new ways, learn from mistakes, and be open to change
STRATEGIC GOALS

The Strategic Goals flow from our Strategic Vision and Mission and mirror the lifecycle of records. To ensure ready access to public records, the records must be managed throughout their lifecycle. The lifecycle of records runs from the creation of a record, through its maintenance and use in conducting City business, and to its final destruction or its continuing use as an archival record.

Because actions taken at the time of a record’s creation may affect its ultimate preservation and continuing use, we must be a leader and advocate for records management (Goal 1) and address the challenges of electronic records (Goal 2). To ensure that we are meeting our responsibilities to our customers, we must make it easy for people to use the records we preserve (Goal 3), maintain these records in appropriate conditions (Goal 4), and manage our resources wisely to achieve our mission (Goal 5). All records shall be retained as required by state law and City policies and resolutions.

Goal #1:
Public records are created, identified, appropriately scheduled, and managed according to retention requirements.

Goal #2:
Electronic public records, including digital recordings, electronic mail, digital communications, and social media records, are controlled, preserved, and made accessible according to retention requirements.

Goal #3:
Increase transparency of City Government by ensuring that public records are easy to access regardless of where they are or where users are for as long as required by records retention regulations.

Goal #4:
All public records are preserved in an appropriate environment.

Goal #5:
Strategically manage, educate, and align staff, technology, and processes to achieve the mission and provide a means to measure the performance.
CURRENT STATUS OF CITY RECORDS

EDUCATION – TRAINING

The State of Oregon’s established retention schedules will serve as the basis for a citywide educational program to include the following:

- Filling a “public records request” from paper-based document storage and electronic records-keeping systems;
- Managing, filing, and transferring records from office space to proper storage facilities;
- Ongoing training in the records process is required, as records are diverse in nature;
- Assurance that records no longer having enduring value for the City will be properly eliminated according to the established state retention criteria;
- Ongoing activity to ensure that all employees are involved in the records process, maintaining the integrity of the records system;
- Promote the implementation of a state-of-the-art records management system to bring the City into the 21st Century.

STORAGE OF PAPER AND ELECTRONIC RECORDS

The City Recorder’s Office will continue to provide ready access to the valuable paper records currently archived, as well as records yet to be turned over for appropriate storage. By the very nature of our business, our work will grow, because even a downsized City Government will continue to generate many records.

Presently the City’s paper records are archived at an offsite records storage facility or in the Records Center at City Hall. The City’s resources are currently committed to a system designed to store and provide access to paper records, of short or long- term value.

One of the goals of this Strategic Plan is to implement a new electronic records management system (RMS) that, along with the anticipated change in state law to allow retention of the permanent record electronically, will eventually reduce the amount of paper records stored on- and offsite. The RMS will ease the access, search-capability, storage, and organization of the City’s electronic records, thus creating more robust access to records for the public and further developing the transparency that the public deserves.
WHAT MUST WE DO TO ACCOMPLISH OUR MISSION?

STRICTEGIC GOAL NO. 1

Public records are created, identified, appropriately scheduled, and managed according to retention requirements.

Objectives

- Identify vital records and implement a policy for their protection.
- Develop new-employee orientation from the City Recorder’s standpoint to train on the value and necessity of managing City records.
- Reinforce the value of retention schedules to departments and provide training on implementation.
- Focus on the importance of trustworthy records, and stress the concepts of authenticity, reliability, integrity, and usability.
- Use resource allocation and risk management to determine records management priorities.
- Focus on those records that are essential to the City as a whole for accountability, protection, or rights, as well as documenting the City’s history.
- Assist departments in looking out for their best interests and encouraging cost-effective and prudent approaches to records management.
- Implement a records compliance function to ensure that records management policies and procedures are being followed. Additionally, compliance will be audited to ensure that records are being retained or destroyed as required in the “normal course of business.”
WHAT MUST WE DO TO GET THERE?

STRATEGIC GOAL NO. 2

Electronic public records, including digital recordings, electronic mail, digital communications, and social media records, are controlled, preserved, and made accessible according to retention requirements.

Objectives

- Update the current social media policy to include management of new technology and use of devices that create public records.
- Update the current e-mail policy for managing e-mail.
- Partner with Information Technology to revise policies and procedures related to data migration and Internet use, employing standards that enable responsible electronic records management.
- In conjunction with IT, implement a records management system citywide that will capture, preserve, index, access and appropriately dispose of any City electronic record, and that will provide for permanent archival electronic management and history of City Government.
WHAT MUST WE DO TO GET THERE?

STRATEGIC GOAL NO. 3

Increase transparency of City Government by ensuring that public records are easy to access regardless of where they are or where users are for as long as required by records retention regulations.

Objectives

- Install computer kiosks at key facilities for citizens to research electronic images and records.
- Expand access of our electronic records to online users through the City’s Website.
- Digitize permanent paper records stored offsite and make accessible to the public via the City’s Website.
- Review and revise as needed the City’s public records request policy and form to ensure compliance with state law and City policies, ensuring a speedy and thorough search and response to the requests.
WHAT MUST WE DO TO GET THERE?

STRATEGIC GOAL NO. 4

All public records are preserved in an appropriate environment.

Objectives:

• City Recorder’s Office to obtain training on historic preservation to ensure long-term, appropriate storage for City records from the 1800s.

• Reduce quantity of cartons stored offsite by converting the documents to electronic format to save dollars and make readily accessible via the City’s Website.

• Take cost-effective steps to environmentally protect our records stored in the onsite Records Center at City Hall.

• Provide adequate storage for photographs, art and other historical documents of the City of Oregon City.

• Identify and log the photographs and other art.
WHAT MUST WE DO TO GET THERE?

STRATEGIC GOAL NO. 5

Strategically manage, educate, and align staff, technology, and processes to achieve the mission and provide a means to measure the performance.

Objectives:

• Ensure that the City hire, develop, sustain, and retain staff according to the competencies needed to achieve these strategic goals.

• Develop the Records Liaisons in each department to be watchdogs and overseers to ensure proper compliance with City policies and state retention regulations within their respective departments.

• Create and demonstrate that effective records management adds value to the City’s processes.

• Develop educational Lunch-n-Learn sessions to effectively educate employees on records management processes and procedures and the importance of records management as an important business tool.

• Seek out new approaches and best practices, particularly on electronic records issues from other municipalities.

• Expand opportunities for our customers to inform us about their information and services requirements.

• Work with Human Resources to ensure that records management is an important aspect of specific job descriptions in every department and incorporating the responsibilities within the job.
STAFF REQUIREMENTS

The City Recorder’s Office needs talented and dedicated people to help meet these goals. The goals require continued opportunities to focus energies, learn new skills, make use of new technologies, and develop partnerships for solving problems. We must continue to build an organizational culture that respects diversity and change, encourages creativity, values risk-taking, communication, commitment, and loyalty.

Recruitment of new staff with fresh ideas, records experience, and an open mind to developing a sustainable records management program are necessary components to a successful records strategic plan. Our planning must include preparation for training leaders for tomorrow so they are ready for the next step. Current members must be supplied with appropriate resources to acquire the skills necessary for working with technologies as well as providing education for supervisory or managerial positions. We must seek ways to recruit and retain these employees in a competitive job market.

HOW WILL WE KNOW IF WE HAVE SUCCEEDED?

This section provides more detail on our planned accomplishments – the long-range performance targets used to measure success, the performance indicators to measure progress, customer results to measure satisfaction, and the achievement of expected outcomes.

The goals and measurements listed on the next page are not the only measures to be used to gauge our progress. Annual performance appraisals will track additional measures and milestones. At the strategic level, the long-range performance targets will indicate to the City and other stakeholders, and the public, if we are on track to accomplish the goals of this plan.
## GOALS AND MEASUREMENT CHART

</tr>
</thead>
<tbody>
<tr>
<td>Strategically manage, educate, and align staff, technology, and processes to achieve the mission and provide a means to measure the performance.</td>
<td>By 2018, the City Recorder’s Office will include a full-time Records Manager, records responsibilities will be and an additional assistant to advance the technology, maintain the City’s records, and educate staff, and records responsibilities will be included on job descriptions of the department’s records liaison position.</td>
</tr>
</tbody>
</table>
CONCLUSIONS

This Five-Year Strategic Plan has been developed as a concrete, measurable, and practical Plan for stemming the losses that have occurred in the City of Oregon City’s history. The Plan will serve to assure adequate documentation of events to come, expand opportunities for all Oregon City citizens, and make use of City records in all forms, now and for the future.

As a living Plan, it will serve as our guidepost in documenting the progress that has been achieved in meeting the goals. It will be re-examined each year to see what has happened to the assumptions on which it is based, what unanticipated challenges have subsequently risen, and what unexpected opportunities have appeared. As needed, that knowledge will be incorporated into a revised Plan that will reflect the current state of progress in achieving the goals, as well as adding new or revised targets. A goal of significant impact for the “present and into the future” will be the implementation of a citywide electronic records management system.

Some progress has been achieved but much remains to be done. By being actively involved in mastering the many challenges of electronic technology, and by understanding that further changes are inevitable, this Strategic Plan will continue to be the dynamic document that will steer the City’s course to future success in maintaining a valuable City asset, City records and history.
